

The MacKay Boats

MacKay Boats have a long and successful reputation for building winning boats including racing powerboats, surfboats and yachts.

From the early 1960's through to 1992 we built the Flying Dutchman class with our boats being used by New Zealand crews for Olympic campaign's from 1964 through to 1992.

Our boats are

- Built with precise processes to exacting standards.
- Built stiff and strong, with the weight and strength where it is needed to make the boat as fast as possible.
- Fitted out with systems that work, customised to suit the sailors own preferences.
- Equipped with the best fittings used for each system.
- Built using strict quality control processes to ensure boats are built consistently and each boat is the very best possible.
- Finished with details that don't just look good, but make a difference to performance.
- Matched with foils designed and built using the latest technology alongside years of experience.
